The Cognitive and Linguistic Sciences in the 21st Century

Nick Chater

*Are there general principles of cognition?*

Nick Chater is a rising star in the field of reasoning and decision-making and their applications in the real world of economics, law, and organizational behavior. His pioneering work on how people make inferences under uncertainty in learning and reasoning has been highly influential. He is former Director of the Institute of Applied Cognitive Science at the University of Warwick, the recipient of the Spearman Medal of the British Psychology Society, and the recipient of the British Experimental Psychology Society Prize. He is the editor of *Rational Models of Cognition and Perspectives on Imitation: From Neuroscience to Social Science.*

Rescheduled for April 25, 7:30 pm
Carmichael Auditorium, Brown University
